

Power Seed

BIOLOGICALLY ACTIVE SOILS

Allowed
in organic
farming

Registration number for organic fertilizers

0038442/23

COMPOSITION

Type of organic soil improver:
Vegetable improver
uncompressed

Mycorrhiza content: 1%

Glomus mosseae,
Glomus intraradices

Content in Rhizosphere bacteria:
. 10¹⁰CFU/g

Absence of GMOs and
pathogens

FORMULATION

Liquid

CLASSIFICATION

No one

PACKAGING

Bottle 1 L
Tank 5 L

APPLICATION

Made in Italy

SPECIFIC ACTION PRODUCT INOCULUM OF MYCORRHIZAL FUNGI

Main features:

POWER SEED is a biological product optimized for application to the seeding, specific for extensive crops (cereals, corn, forage) and industrial (rapeseed, sorghum, sunflower, tobacco, aromatic plants and medicinal). Formulated with a combination of fungal and bacterial species, it promotes ecological balance in the rhizosphere, improving root growth, nutrient assimilation and crop health.

Mechanism of action

POWER SEED acts thanks to shrub mycorrhizae and rhizobacteria that mobilize nutrients not readily available (phosphorus, organic nitrogen, microelements) and transport them directly to the plant. Natural phytohormones produced (such as auxins) stimulate root development, even under environmental stress or nutritional deficits, by extending access to nutrients and water. In addition, the product improves plant resistance to salinity, heavy metals and other environmental stresses, ensuring improved health and productivity.

INSTRUCTIONS FOR USE

Types of crops (cereals, legumes, etc.):

liquid: 100-300 ml/ 100 kg of seeds
powder: 200-600 g/ 100 kg of seeds

Apply the product evenly.
