FERTILIZER FOR BALANCED PLANT DEVELOPMENT

ORGANOMINERAL NITROGEN FERTILIZER IN SUSPENSION

COMPOSITION

Total Nitrogen (N)	8.0%
Organic Nitrogen (N)	1.0%
Ammoniacal Nitrogen (N)	2.5%
Ureic Nitrogen (N)	4.5%
Organic Carbon (C)	15%
<small>of biological origin</small>	
Humidification rate	80%
Carbon (C)	12%
<small>humic and fulvic</small>	

The product also contains:

Betaine e Amino acids

C.P CHARACTERISTICS

pH	5.00 +/- 0.5
Density	1.20 +/- 0.5
Color	Brown
Smell	Characteristic
Solubility	Completed

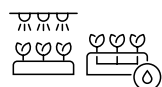

FORMULATION

Liquid

PACKAGING

Bottle	1 L
Tank	5 L
Tank	10 L
Barrel	20 L

APPLICATION

Made in Italy

Main features:

START UP is a product based on humic and fulvic acids extracted from leonardite, formulated to stimulate plant growth and increase the biological fertility of the soil. Ideal for sandy or poor soil with organic matter, it improves the resistance of plants to environmental stresses and osmotic, promoting a healthy and vigorous development.

Mechanism of action

START UP stimulates the formation of new root hair, increasing nutrient absorption and stress tolerance. It combines xenobiotic substances and reduces the negative effects of misfertilizations, reducing physiopathies such as apical rot and wastage. The presence of plant amino acids enhances the metabolism of plants, improving their response in all phenological stages.

INSTRUCTIONS FOR USE

- Open field and greenhouse horticultural crops: soil 5-10 L/ha, sprinkling 150-250 ml/hl
 - Nursery (plants in container): soil 0,5-1 L/1000 m², sprinkling 150-250 ml/hl
 - Fresh-cut salads: soil 0,5-1 l/1000 m², sprinkling 150-250 ml/hl
 - Strawberries: soil 0,5-1 L/1000 m², sprinkling 150-250 ml/hl
 - Fresh and aromatic herbs: soil 0,5-1 L/1000 m², sprinkling 150-250 ml/hl
 - Flowers and ornamental plants: soil 0,5-1 L/1000 m², sprinkling 150-250 ml/hl
 - Fruit [pome fruit(apple, pear, etc.), stone fruit(apricot, peach, cherry, etc.), Actinidia (kiwi)]: soil 0,5-1 L/1000 m², sprinkling 150-250 ml/hl
 - Grapes/ olive: soil 0,5-1 L/1000 m², sprinkling 150-250 ml/hl
 - Grass: soil 0,5-1 L/1000 m², sprinkling 150-250 ml/hl
-
- Shake well before use
 - Apply the product evenly
 - It is advisable to test some plants for varietal tests before treating the whole surface
 - Reapply the product if necessary
