

Tap San

PROTECTED ENVIRONMENTS

SANITIZING SHOE CLEANER

Main features:

TAP SAN is a liquid sanitizing detergent specifically designed for entrance and passage areas, designed to sanitise footwear, trolleys and surfaces, preventing contamination in environments that require high hygiene standards. Its formulation is safe for operators and plants, free of harmful solvents and vapours, and compatible with all materials. It ensures rapid deactivation of pathogens in a few seconds, limiting the spread of contamination.

Mechanism of action

TAP SAN works by combining active ingredients such as benzalkonium chloride and benzoic acid, which quickly neutralise bacteria and pathogens. Its formulation stabilizes the sanitizing action, preventing evaporation and ensuring uniform coverage, keeping surfaces protected and reducing the risk of contamination.

COMPOSITION

Benzalkonium chloride
Benzoic acid
Alkylphenolpolyglycerol ether
Propanol

C.P CHARACTERISTICS

pH 3.00-/+ 0.5
Density 0.98 +/- 0.5
Color Light yellow
Smell Characteristic
Solubility Completed

FORMULATION

Liquid

CLASSIFICATION

Attention

PACKAGING

Tank 10 L

APPLICATION

INSTRUCTIONS FOR USE

TAP SAN should be used as is, preferably poured on TAP, non-slip rubber mat designed to contain the liquid in the transit area before entering the premises.
